- 14:10–14:30 **Conclusions**

Workshop
Identity Documents in Use
University of Vienna 22.-23.09.2022

The workshop deals with the co-production and use of identity documents from a historical and interdisciplinary perspective. Establishing the identity of persons was (and still is) fundamental for multiple tasks and operations of the state. However, various other parties – beyond state authorities – could be involved in identifying, registering and categorizing individuals. To better understand the effects and effectiveness of identification practices and procedures, this workshop will examine how the parties involved interacted in various contexts and constellations, both in consensus and conflict. It will reflect on the involved parties' perspectives and the ways in which documents could be used and abused for different purposes.
